

Professional solutions for IFSEC, secured environment for Philippine

2018-06-04 17:27

Philippine is a multi-ethnic archipelago country located in south-east of Asia. In the recent years, it has a rapid economic development as a developing country, and becomes one of the fastest-growing economy in Asia. The GDP increasing rate of Philippine reached 6.7% in 2017.

But still, as a country with full of potential, Philippine also has some security problems within it mostly because of the lack of good end-to-end solutions for better video surveillance.

Therefore, as a participant of the local exhibition, we brought full sets of our safe city solution here and aimed to help improving the local situation with our unique technologies.

Command center solution helps to monitor all the situations effectively so that quick actions can be applied when facing any situations. While falcon system is also provided to greatly increase the catching rate by not only intelligent facial recognition but remembering the whole body features.

Mobile solution, as a part of the safe city, improves the working efficiency for police at the same time gives a smooth communication experience between the command center, vehicles and staffs.

In our opinion, safe environment is not a one day work but countless experience with cutting-edge technologies, we believe that through better co-operation, KEDACOM is able to progress and witness the better future together with Philippine, with the world.
